

We're looking for a Software Development Engineer.

Join us!

NOFFZ Technologies is a global development service provider and system integrator. We realize products and electronic components as well as turnkey and innovative measurement and automation systems. We are an owner-managed family business with a successful, 30-year company history and on course for international growth.

Your responsibilities:

As a part of our local team in Serbia, you will work on development and deployment of test systems used in production lines or validation labs of our automotive and semiconductor industry customers.

Together with colleagues from NOFFZ Group, as a member of international team, you will work on projects for world's biggest automotive companies.

While working on these projects, your tasks will be:

- ▶ Understanding product which needs to be tested and test requirements
- ▶ Designing test system according to test requirements
- ▶ Development of test software
- ▶ Automating and optimizing test execution
- ▶ Executing measurements and analyzing results
- ▶ System deployment at customer's site

We offer:

- ▶ Challenging projects with cutting edge technologies
- ▶ A pleasant working atmosphere where family culture and respect are core values
- ▶ Continuous technical and professional training
- ▶ International work environment with possibilities to travel
- ▶ Attractive compensation package including private health insurance, sport activities and home office flexibility

Your qualifications:

- ▶ BsC / MsC in Electrical Engineering or students of final year
- ▶ All study modules are welcome, advantage for Electronics, Signals and Systems and Telecommunication
- ▶ Knowledgeable in some of software development environments: LabVIEW, C++, Python, C#/.NET
- ▶ Good foundation in electronics and measurement systems
- ▶ Good knowledge of English language
