Spothopper is a new startup from Milwaukee, USA that brings a whole new experience to social geolocation by recommending users nearby venues and drinks through a simple mobile app. Joining our engineering team in Belgrade will offer you the opportunity to work with cool new technologies, build realtime apps and solve exciting software problems that were never solved before.
We are looking for:

Core Platform - Grails Developer

Key responsibilities:

• Work on a growing set of back-end services for internal use
• Implementation and optimization of recommender algorithms
• Developing full HTML5 website for consumers

An ideal candidate would have:

• 2+ years of relevant engineering experience;
• efficient experience in at least one of Groovy, Ruby, Python or Java languages;
• experience in one of the frameworks: Grails, Rails, Spring MVC, Django
• experience with HTML5, CSS3
• solid experience with *nix operating systems
• knowledge of RESTful web services
• knowledge of design patterns and extensive JUnit testing

Bonus:

• Knowledge of recommendation algorithms and frameworks
• Experience with geolocation and Google Maps API
• Experience with Twitter Bootstrap

We don't require the candidates to meet every single requirement on our list. The bullets are there also to explain what we do and what you'll have a change to learn if you join our team. However, we are looking for a strong cultural fit and desire to learn.

We expect your CV at shadmin@spothopperapp.com.
