

Job Title: Junior Embedded Software Developer

Company: mySkin

Url: www.myskin.com

Job Location: Belgrade, Serbia

Who are we?

mySkin is changing the way people understand their skin. We are creating hardware, software, and mobile solutions to measure and understand skin through breakthrough technology. Some projects are behind us. They gave us invaluable experience and knowledge. Now, we are in the midst of something new and exciting, that just might require your help.

What do we offer?

At mySkin, you would join a diverse group of engineers, scientists, designers, and marketers on a team that includes both recent grads and seasoned veterans. We do our best to maintain a highly creative international working environment, always provide challenging projects and opportunities, and future professional growth and development.

What are we looking for?

We value creativity, innovation, hard work, open communication and fast iteration. All this allows us to act on valuable feedback from employees and users alike. mySkin's culture is one of highly-encouraged contribution at all levels and constant informal collaboration. Lots of big words, we know. Don't worry. We also have fun and get excited about things.

Key Qualifications: (Junior)

- Strong C/C++ development skills
- Strong knowledge and experience in embedded development (C for Embedded)
- Experienced with at least two MCU families (extra points for ARM)
- Strong teamwork skills

What would your work day look like?

Your main tasks would be: firmware development, optimization of embedded codes, writing programs for the host side (win/linux/osx) for hardware development and troubleshooting.

We encourage you to ask any questions about the position and our company on jobs@myskin.com where you can also send your applications.
